

HUP060 run-02: matched 1-s free-rollout input ablation

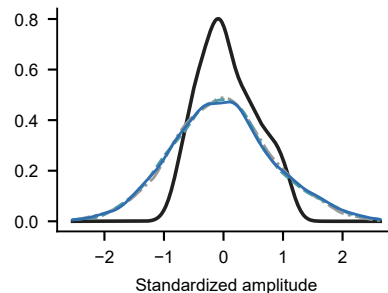

State only, state + delay, and state + delay + PLV graph models are fit on the same run-01 data and evaluated on the same fixed context-3 window with matched noise.

— Observed actual - - - State only - . - State + delay — State + delay + graph

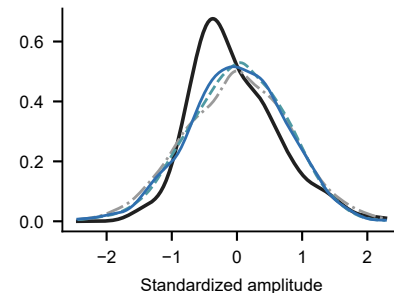

a RPFa3: selected SOZ

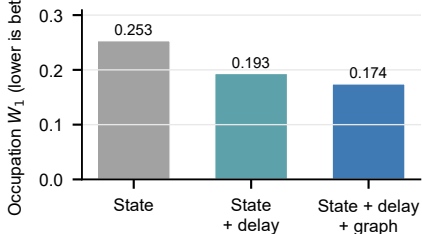

b RA3: selected non-SOZ

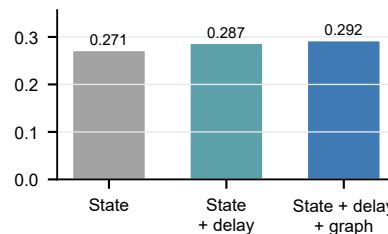

c RAFa4: unselected

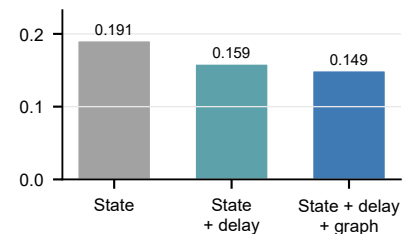

d RPFa3: distribution error

e RA3: distribution error

f RAFa4: distribution error

All predictions are autonomous 256-step RC-SDE rollouts; no future observation refresh is used. Each predicted occupation law pools 32 technical particles and 256 forecast times from the same 1-s window.
