

# HUP060 run-02: unified zero-control distribution error

The same 36 electrodes are aligned across panels. Small mean error but larger SD error indicates that most W1 mismatch comes from distribution width.

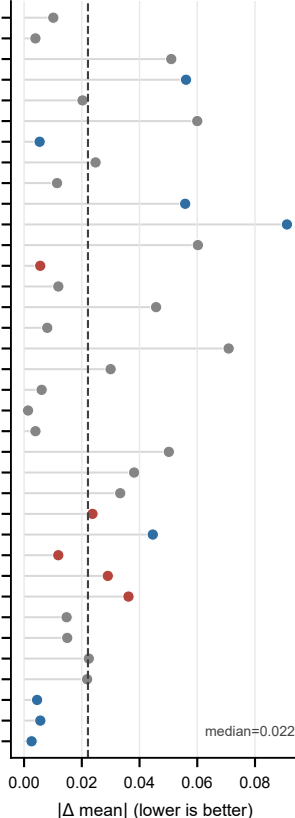

**a**

## Distribution error

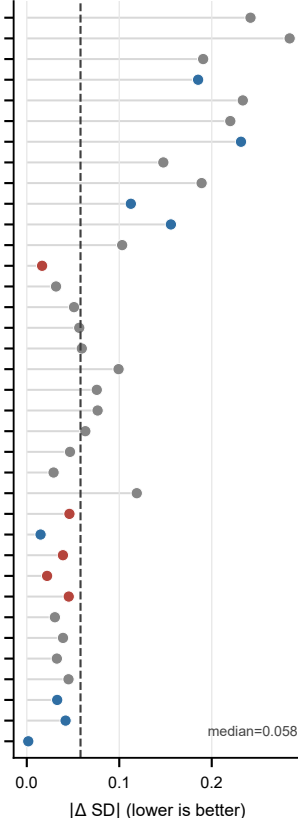

**b**

## Location error

**c**

## Spread error

Rows are ordered by  $W_1$  in panel a. Dashed lines show all-electrode medians. Electrode summaries are descriptive within one patient; no independent-sample inference is made.
