

HUP060 run-02: protocol-matched Graph-RC input ablation

All variants use the same run-01 fit data, context-3 initial state, diffusion scale, and reconstructed Part III innovation tensor.

— Observed actual - - - State only - - - State + delay — State + delay + graph

a RPFa3: selected SOZ

b RA3: selected non-SOZ

c RAFa4: unselected

d RPFa3: distribution error

e RA3: distribution error

f RAFa4: distribution error

All predictions are autonomous 256-step RC-SDE rollouts with $u=0$ and no future-observation refresh. The full graph arm exactly reproduces the Part III zero-control law.
